

CSC 190 Projects

We are looking for a web based cash reconciliation and gift certificate management system. I will provide the students with an open source project that provides the printing drivers they will need for the reports and gift certificates.

The system will need to be able to take in sales, 2 different credit card machine totals and the total cash and cash payouts and determine the over or shortage for the day. This data should be stored in a SQL Table and should be able to be searched to find a specific date or select a range for a full report with totals for the date range.

The gift certificate system would be an add in to this that would have 3 functions create redeem and check gift certificates that would be stored in the SQL server. I can expand or reduce the scope of this and go into further details and also show example of the current non-web based system.
